

Bargaining

Question and its Answer given by the Father of Our Universe on 08 November 2025

Question: Dear Father of Our Universe, is bargaining, i.e. when a person is buying something, they bargain to buy it cheaper, at a lower price, good or not good from the Lord's point of view?

Answer: Bargaining is something good as it gives the opportunity to create balance and the selling price to be good and acceptable for both sides, i.e. everyone to be satisfied.

It is not good when, while bargaining, the arms of the seller are 'twisted', i.e. the buyer aims at lowering the price too much and at all costs. Because if it is quite expensive for the buyer and they cannot afford it, they will be without wanting to buy the specific thing and without bargaining for it, but if they want to buy it and start bargaining, this means they can pay for it, and it would be good if the purchase-and-sale transaction is good for both sides – both the seller and the buyer.

I.e. it is not good when the seller sells their goods without desire and satisfaction and in case they become negative! Then, one had better be without buying this commodity.

Question: Dear Father of Our Universe, what is the effect of bargaining when it is performed?

Answer: The effect is:

1) good and without harm for the buyer in energy in case the seller is satisfied with the transaction.

2)If the seller is unsatisfied, but they have been paid enough and they have profited from the deal instead of losing, but they are still not satisfied as they are left without an excess profit, i.e. without having robbed the buyer, then, the buyer is without any harm.

3)However, when the buyer has bought at an exceptionally low price, which even cannot cover the expenses of the seller on this transaction, then the seller has the right to satisfy themselves on the buyer's expense, and this happens automatically, on the subtle plane, without the two of them even realising it with their outer Consciousness!

4)If the harm is much greater or even if it is without being so great, but in case the buyer or the seller's profit is too big and disproportionate to the price of the transaction, then, again automatically, the scales are balanced in energy to the benefit of the harmed side of the transaction. And this can be a prolonged process ahead in time.
